

# Nothing Compares To A Room View With A View™

The BEST  
Solution  
For Low  
Vision!

The  
**VIEW™**  
Made In The USA

Distance Viewing

**E**ven the most sight-impaired individuals can have a room FILLED with views... of anything they desire! Whether it is the television set, the newspaper, the chalkboard, or the scenery outside your window, the VIEW™ will bring it to you in full focus.

Don't spend hundreds or even thousands of dollars more trying to read, write and live independently! The VIEW™ from VTI represents the most variable, state-of-the-art video magnification design available.

With the monitor easily postured anywhere from the X-Y table up to 14 1/2", that kink in the neck for people shorter in stature will be gone forever. See images at YOUR level, not the level of the designer.

The camera easily moves 360 degrees on a horizontal plane and 240 degrees on a vertical plane for the most flexible positioning system.

The monitor and controls can be positioned directly in front of the user, regardless of their height. In addition, unlike other systems with buttons on the camera, our buttons are placed strategically on the monitor, precisely at the user's point of focus.

Features include:

- Pop-up design, weighing only 14 lbs.
- Auto-focus
- Color, enhanced black on white and enhanced white on black viewing modes
- 100,000 hour LED lighting
- Optional battery and optional hard or soft case
- Ideal for students, home, office and travel!
